

# Apparel is gaining and Electronics is losing ground: what six months of sales mean for the supplier review

How category revenue is trending, which products lead and lag inside each category, whether discounts pay back, and when shoppers buy most, drawn from 107,836 transactions.

|                       |                  |                    |                              |                            |
|-----------------------|------------------|--------------------|------------------------------|----------------------------|
| 107,836               | 25               | 5                  | ₹4,263.92                    | 2.58                       |
| Transactions analysed | Products tracked | Product categories | Avg. revenue per transaction | Avg. units per transaction |

## §01 Which categories are growing, and which are shrinking

Change in monthly revenue from January to June (left), and the month-by-month path indexed to January = 100 (right).

**Electronics is the only category to fall in each of the last three months** (April to June), from ₹45.69M to ₹29.69M. Home & Kitchen (–18.49%) is the second concern; Personal Care moved least (+2.18%).

## §02 Leading and lagging products in each category

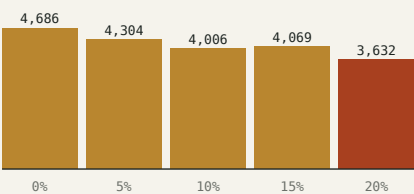

Six-month revenue, top two and bottom two per category. The last column shows how far the weakest product sits below the strongest.

| Category       | Top product              | Runner-up              | Second-lowest              | Lowest                  | Gap   |
|----------------|--------------------------|------------------------|----------------------------|-------------------------|-------|
| Apparel        | Saree<br>₹14.16M         | T-Shirt<br>₹14.10M     | Formal Shirt<br>₹13.75M    | Kurta<br>₹13.61M        | 3.9%  |
| Electronics    | Headphones<br>₹47.70M    | Laptop<br>₹46.55M      | Tablet<br>₹44.74M          | Smart TV<br>₹41.88M     | 12.2% |
| Grocery        | Rice (5kg)<br>₹8.56M     | Dal (1kg)<br>₹8.49M    | Oil (1L)<br>₹8.43M         | Sugar (1kg)<br>₹8.38M   | 2.2%  |
| Home & Kitchen | Mixer Grinder<br>₹16.90M | Storage Box<br>₹16.68M | Pressure Cooker<br>₹16.14M | Water Bottle<br>₹15.83M | 6.4%  |
| Personal Care  | Shampoo<br>₹8.17M        | Body Lotion<br>₹8.11M  | Toothpaste<br>₹7.77M       | Sunscreen<br>₹7.59M     | 7.0%  |

Even Smart TV, Electronics' lowest product (₹41.88M), out-earns the best product in every other category, so this decline matters most.

## §03 Do discounts pay back?

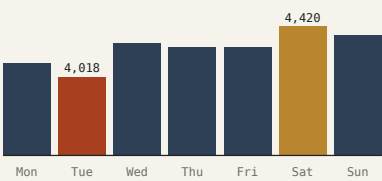

Avg. revenue per transaction (₹) by discount level.

Units per basket stay near 2.6 at every level, so deeper discounts are not buying bigger baskets. Revenue per transaction is 22.5% lower at 20% than at 0%. No sale carries more than 20% off.

## §04 When demand peaks

Avg. revenue per transaction (₹) by day of week.

Saturday leads at ₹4,420.02 and Tuesday trails at ₹4,017.71, a 10% spread. January is the strongest month (₹84.77M), June the weakest (₹69.28M). Electronics peaks on Wednesday and is softest on Tuesday.

## §05 What to raise in the meeting

|           |                                                                                                                       |
|-----------|-----------------------------------------------------------------------------------------------------------------------|
| Challenge | <b>Electronics: down 35.02%</b> in six months, with no recovery. Ask its suppliers to justify shelf space.            |
| Back      | <b>Apparel: up 34.10%</b> (₹10.05M to ₹13.48M), higher every month since February.                                    |
| Discounts | Revenue per transaction falls from <b>₹4,685.65</b> (0%) to <b>₹3,631.73</b> (20%). Ask what deeper discounts return. |
| Timing    | Tuesday is weakest for the chain and for Electronics, the natural promotion slot.                                     |

RECOMMENDATION

Put Electronics under review first, since it is the largest category and the only one to fall three months running. Treat Apparel as the strongest case for extra support. Revenue and units show direction, but product cost and gross margin are needed before any investment call.
